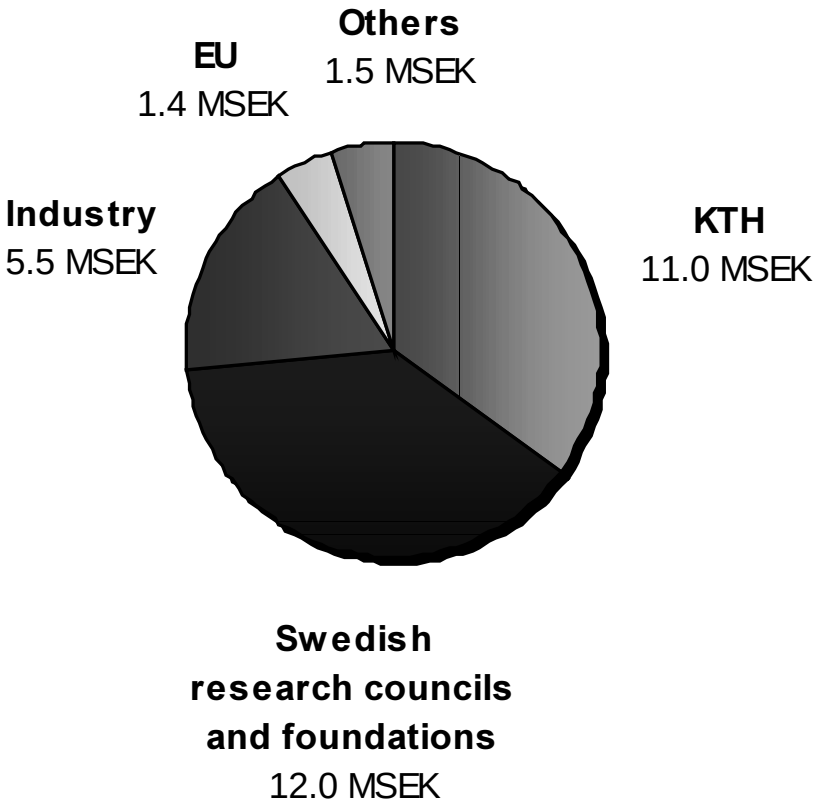
# FINANCES AND RESEARCH GRANTS


The total turnover during 2000 for the department and the Centre of Speech Technology (CTT) was 35 MSEK. The centre is a joint venture in which industrial partners, the Swedish Board for Industrial and Technical Development (Nutek) and KTH take equal shares. The funding of the activities was dominated by Swedish research councils and foundations (12 MSEK), closely followed by KTH (11 MSEK). Swedish and international industry, mainly in the telecom field, invested 5.5 MSEK in our research projects. The department has a mixed portfolio with financiers, including seven Swedish research councils and five foundations, the two major Swedish telecom companies Ericsson and Telia, several companies in The Netherlands, Japan and USA, and the European Commission.
