

# SMAC93

Proceedings of the Stockholm Music Acoustics Conference 1993

## TABLE OF CONTENTS

<b>Preface</b>	v
<b>OPENING SESSION</b>	
<b>Bennet G:</b> Musical composition and musical acoustics: -What have they to do with each other? ( <i>Invited paper</i> )	3
<b>Rossing T D:</b> Musical acoustics research since SMAC 83. ( <i>Invited paper</i> )	10
<b>Sataloff R T:</b> The contributions of voice science to voice care. ( <i>Invited paper</i> )	20
<b>SESSION MUSIC PERCEPTION</b>	
<b>D'Allessandro C &amp; Castellengo M:</b> The pitch of short-duration vibrato tones: experimental data and numerical model.	25
<b>Camiz P:</b> A physico-mathematical model for the spontaneous organization of the auditory cortex.	31
<b>Deutch W A:</b> Spectral peaks in auditory figure-background discrimination.	36
<b>Friberg A &amp; Sundberg J:</b> Perception of just noticeable time displacement of a tone presented in a metrical sequence at different tempos.	39
<b>Gong Z, Xiaomin G, &amp; Wenxue X:</b> Pitch-establishing time.	44
<b>Parncutt R:</b> Categorical perception of short rhythmic events.	47
<b>Rakowski A:</b> Investigating short-term auditory memory with the method of vocal pitch control.	53
<b>Saiwaki N, Inokuchi S, Inouye T, Katayama S, &amp; Hori Y:</b> An analysis of electroencephalograms during music listening.	58
<b>SESSION MUSIC PERFORMANCE</b>	
<b>Battel G U &amp; Bresin R:</b> Analysis by synthesis in piano performance: a study on the theme of the Brahms' "Variations on a theme of Paganini".	69
<b>Bresin R, De Poli G, &amp; Vidolin A:</b> A neural networks based system of automatic performance of musical scores.	74
<b>Castellengo M:</b> Fusion or separation: From vibrato to vocal trill.	79
<b>Edlund B:</b> The tyranny of the bar-lines. Encoding notated meter in performance.	84
<b>Fyk J:</b> Static and dynamic model of musical intonation.	89
<b>Födermayer F:</b> "Parmi veder le lagrime". One aria, three interpretations.	96
<b>Gabrielsson A:</b> Intention and emotional expression in music performance.	108
<b>Mazzola G:</b> Musical interpretation via vector fields: A new human workstation on the NEXTSTEP environment.	112
<b>Meyer J:</b> Vibrato sounds in large halls.	117
<b>Prame E:</b> Measurements of the vibrato rate of 10 singers.	122
<b>Repp B H:</b> Musical motion: Some historical and contemporary perspectives ( <i>Invited paper</i> )	128

<b>Sundberg J, Friberg A, &amp; Frydén L:</b> Music and locomotion. Perception of tones with envelopes replicating force patterns of walking.	136
<b>Taguti T, Ohgushi K &amp; Sueoka T:</b> Individual differences in the pedal work of piano performance.	142
<b>Todd McAngus N P:</b> Multi-scale analysis of expressive signals: Recovery of structure and motion.	146
<b>Tro J:</b> Perception of microdynamical variation in piano performances.	150
<b>SESSION SINGING</b>	
<b>Brattström V, Odenrick L, &amp; Kvam E:</b> Facial appearance in professional singers and wind instrument players.	157
<b>Estill J, Fujimura O, Erickson D, Zhang T &amp; Beechler K:</b> Vocal tract contribution to voice qualities.	161
<b>Gramming P, Nord L, Sundberg J &amp; Elliot N:</b> Does the nose resonate during singing?	166
<b>Hammarberg B &amp; Södersten M:</b> Glottal closure patterns and waveform characteristics in female speaking voices –a preliminary report.	172
<b>Hertegård S &amp; Gauffin J:</b> Voice source-filter interaction during high-pitched female singing.	177
<b>Hettergott A:</b> Sprechgesangstimme in Arnold Schoenberg's 'pierrot lunaire'	183
<b>Howard D M &amp; Rossiter D P:</b> Real-time visual displays for use in singing training: An overview.	191
<b>Imaizumi S, Saida H, Shimura Y &amp; Hirose H:</b> Harmonic analysis of the singing voice: Acoustic characteristics of vibrato.	197
<b>Laukkanen A-M, Vilkman E &amp; Laine U:</b> On the effects of supralaryngeal acoustics on vocal function. A study with special reference to voice training with “resonance tubes”.	201
<b>Leino T:</b> Long-term average spectrum study of speaking voice quality of male actors.	206
<b>Lippus U:</b> Prosody in singing	211
<b>McAllister A, Sederholm E &amp; Sundberg J:</b> Acoustic and perceptual analysis of vocal registers in children.	216
<b>Nawka T, Seidner W &amp; Cebulla M:</b> Experiments on arbitrarily influencing the singer's vibrato.	221
<b>Pabon P:</b> The phonetogram in singing voice analysis and synthesis.	228
<b>Pelorson X, Hirschberg A, Auregan Y &amp; Baillet H:</b> Fluid dynamic aspects of voiced sound production: 1) a modified two-mass model.	234
<b>Ross J &amp; Lehiste I:</b> Estonian laments: A study of their temporal structure.	240
<b>Skålevik M:</b> Sound radiation from the chest of bass singers.	244
<b>Södersten M, Högset C &amp; Sundberg J:</b> Glottal airflow and subglottal pressure in the falsetto and modal registers of countertenor singers.	249
<b>Sonninen A, Hurme P &amp; Sundberg J:</b> Physiological and acoustic observations of support in singing.	254
<b>Ternström S:</b> What can we learn from the acoustical study of choir singing? ( <i>Invited paper</i> )	259
<b>Troup G J, Djordjevic S, Bowe H, &amp; Long J:</b> A pilot study of the spectra of sustained sung consonants.	264

<b>Vilkman E &amp; Alku P:</b> Register shift in the lower pitch range.	271
<b>SESSION SYNTHESIS OF SINGING</b>	
Berndtsson G & Sundberg J: The MUSSE DIG Singing Synthesis, KTH, Stockholm (Baritone and Bass)	279
<b>Dan T K, Mukherjee B &amp; Datta A K:</b> Temporal approach for synthesis of singing (soprano 1)	282
<b>Pabon P:</b> A rel time singing voice synthesizer (Alto)	288
<b>Cook P R:</b> New control strategies for the Singer Articulatory Voice Synthesis System (soprano 2)	294
<b>Titze I &amp; Story B:</b> The Iowa Singing Synthesis (Tenor)	294
<b>SESSION PIANO AND PERCUSSION</b>	
<b>Askenfelt A:</b> Observations on the transient components of the piano tone.	297
<b>Galembo A &amp; Askenfelt A:</b> Measuring inharmonicity through pitch extraction.	302
<b>Hall D E:</b> String excitation: piano, harpsichord and clavichord. ( <i>Invited paper</i> )	309
<b>Hansen U J &amp; Rossing T D:</b> Vibrational mode splitting in almond-shaped cylinders.	315
<b>Koornhof G W &amp; van der Walt A J:</b> The influence of touch on piano sound.	318
<b>Nakamura I &amp; Naganuma D:</b> Characteristics of piano sound spectra.	325
<b>Rossing T D &amp; von Falkenhausen L:</b> The effect of geometry on the tone separation in Chinese two-tone bells.	331
<b>SESSION VIOLIN</b>	
<b>Askenfelt A:</b> A look at violin bows.	341
<b>Barlow C Y &amp; Woodhouse J:</b> Microstructure and properties of bent spruce.	346
<b>Bazant P, Stephanek T &amp; Melka A:</b> Predicting sound quality of violin from its frequency response.	351
<b>Bork I:</b> Impulse measurements on violin	355
<b>Bowie J C:</b> Principles in acoustic bridge design.	361
<b>Guettler K:</b> Dynamics of the sound spectrum with relation to bow pressure, string torsion, bow/hair compliance and resin characteristics.	364
<b>Hanson R J, Anderson J M &amp; Macomber H K:</b> Measurements of nonlinear effects in a vibrating wire.	369
<b>Hutchins C M:</b> Tonal effects of interactions between the two lowest cavity modes and three body modes of the violin.	373
<b>Inoue T &amp; Tonegawa H:</b> Measured level and phase contours of pressure on the surface of vibrating shells.	379
<b>Jansson E V, Niewczyk B &amp; Frydén L:</b> Timbre and properties of a violin.	383
<b>Kondo M &amp; Kubota H:</b> Bowed string seen in the light of acceleration.	387

<b>Langhoff A:</b> Measurement of acoustic violin spectra and their interpretation using a 3D representation.	392
<b>Molin N-E, Saldner H O, &amp; Jansson E V:</b> Eigenmodes and electronic holography on three violins.	397
<b>Müller H A:</b> The acoustical quality of the violin with respect to its physical properties. ( <i>Invited paper</i> )	402
<b>Pitteroff R:</b> Modelling of the bowed-string taking into account the width of the bow.	407
<b>Rodgers O E:</b> The limits of violin plate tuning, an overview.	411
<b>Schleske M:</b> The influence of changes in the distribution of mass and stiffness of violin-plates on eigenfrequencies and mode-shapes of the violin.	420
<b>Schumacher RT:</b> Aperiodicity, subharmonics, and noise in bowed string instruments.	428
<b>Weinreich G:</b> Radiativity revisited: theory and experiment ten years later. ( <i>Invited paper</i> )	432
<b>Woodhouse J:</b> A set of test violins for player-rating experiments.	438

## SESSION GUITAR

<b>Karjalainen M &amp; Välimäki V:</b> Model-based analysis/synthesis of the acoustic guitar.	443
<b>Lambourg C &amp; Chaigne A:</b> Measurement and modeling of the admittance matrix at the bridge in guitars.	448
<b>Meinel E:</b> Modal analysis on zither.	454
<b>Richardson B E:</b> Numerical modelling of stringed musical instruments. ( <i>Invited paper</i> )	457

## SESSION WIND INSTRUMENTS

<b>Agulló J, Cardona S &amp; Keefe D H:</b> Time-domain measurements of reflection functions for discontinuities in wind-instrument air columns.	465
<b>Amir N, Rosenhouse G &amp; Shimony U:</b> Reconstructing the bore of brass wind instruments: theory and experiments.	479
<b>Kergomard J:</b> New resonators having harmonic eigenfrequencies.	476
<b>Dalmont J P &amp; Gilbert J:</b> Inharmonicity and ease of playing of the saxophone.	482
<b>Dudley J D &amp; Strong W J:</b> Computer simulation of a trumpet with mechanical "lips".	486
<b>Fletcher N:</b> Nonlinearity, transients and spectra. ( <i>Invited paper</i> )	490
<b>Keefe D H, Barjau A &amp; Agulló J:</b> Theory of wave propagation in axisymmetric horns.	496
<b>Kobata T &amp; Idogawa T:</b> Measurements of the variables taking part in the sounding of a clarinet artificially blown.	501
<b>Krüger W:</b> Player's experiences, signal processing, and the design of woodwind instruments.	505
<b>Moral J A &amp; Alarcia A A:</b> Acoustics of the txistu.	510

<b>Stepánek J, Otcenásek Z &amp; Syrový V:</b> Acoustic documentation of church organs.	516
<b>Strong W J &amp; Dudley J D:</b> Simulation of a player-trumpet system.	520
<b>Verge M-P &amp; Caussé R:</b> Linear analysis of the initial transients of a recorder.	525

#### **WORKSHOP: METHODS**

<b>Hansen U J &amp; Bork I:</b> Adapting techniques of modal analysis to sound field representation.	533
<b>Merlier B:</b> Space and music.	539
<b>Stanzial D:</b> Can humans perceive the energy field of sound?	545
<b>Strulov A:</b> The hysteretic model of the grand piano hammer-string interaction.	548
<b>Sundin N-G:</b> Aesthetic criteria of musical interpretation in contemporary music.	551
<b>Widholm G &amp; Winkler W:</b> Evaluation of musical instrument quality by computer systems. Examples of realisation.	560

#### **SESSION PHYSICAL MODELLING**

<b>Chaigne A:</b> Some thoughts on physical modelling.	569
<b>Doutaut V &amp; Chaigne A:</b> Time domain simulations of xylophone bars.	574
<b>Richard G, d'Alessandro C &amp; Grau S:</b> Musical noises synthesis using random Formant Waveforms.	580
<b>Rocchesso D &amp; Turra F:</b> A generalized excitor for real-time sound synthesis by physical models.	584
<b>Woodhouse J:</b> Computer modelling of the bowed string.	589

<b>Adresses to authors</b>	595
----------------------------	-----

<b>Sound examples</b>	598
